Tomato leaves and stems-may cause tremors, heart irregularities

Walnuts

Xylitol-this is an artificial sweetener-may cause a sudden drop in blood sugar, tremors, depression

This is not a complete list. Whenever you are in doubt, please call your veterinarian ASAP!

Keep the below number for Poison Control and the number of your closest emergency vet close by (it's helpful to program them into your cell phone so you can call as you are running out the door, or are away from home): ASPCA Animal Poison Control Center: **(888) 426-4435**. A \$60 consultation fee may be applied to your credit card.

To save time, drive to all of the 24 hour emergency vets in your area so that you know the best routes to take depending on the time of day and traffic.

Remember to dog-proof your home just as you would child-proof your home. Also, keep an unopened bottle of Hydrogen Peroxide to use if poison control directs you to induce vomiting. They will instruct you on the proper dose for your dog.
